The snails were first identified by the Wisconsin Department of Natural Resources. “The discovery, the first in an inland Midwestern stream, is spurring the state to begin rapid response procedures to try to contain the snail, and to call on waterfowl hunters, trappers, anglers and hikers to take precautions to avoid accidentally spreading the species.”

“This is a significant and disappointing find in Wisconsin,” says Dr. Wake- man, who coordinates the Department of Natural Resources aquatic invasive species efforts. “The New Zealand mud snail can be extremely prolific, has altered the food chain and may be having an impact on fish populations in Western streams.”

“We don’t know what the impact will be in Wisconsin, but we do know that there is no good way to eradicate the snails so we are focusing on containing them as quickly as we can and ask for citizens’ help in doing that as well.”

Wakeman says DNR has notified partners of the discovery, and will work with citizen scientists, the River Alliance of Wisconsin, Trout Unlimited, University of Wisconsin-Extension, Wisconsin Sea Grant and Dane County to contain the species through increasing awareness of prevention steps among those who might inadvertently spread the snail: hunters, anglers, trappers and hikers.

Signage, and wash stations along the area where the invasive species has been detected are among the educational efforts likely to be used, Wakeman says.

The department’s discovered the snails during routine stream monitoring. The snails were first identified by the Aquatic Biomonitoring Lab at the University of Wisconsin-Stevens Point and then confirmed earlier this month by Dr. Kathryn Perez from UW-La Crosse, who identified all individuals in the samples as belonging to the “Clone 1” population, previously found only in the western states as far east as Colorado. A “Clone 2” population also exist in the Great Lakes, which arrived by ballast water.

The New Zealand mud snail, the size of a grain of sand, has a black and brown shell and is capable of reaching high densities — up to 500,000 per square meter. The snails outcompete native aquatic insects that are food for fish and other aquatic life but are not good food sources themselves.

The snails are listed as a prohibited species in Wisconsin, meaning it’s illegal to buy, sell, possess or transfer them without a permit.

Although trout season on the creek has closed for winter, hunters, hikers and trappers visiting the Driftless area should take care to review gear disinfection protocols — particularly for waders, where the tiny snails can cling to rubber or mud.

“This is why it’s so important to clean your equipment before leaving a lake or stream — and ask your friends and guests to do the same,” Wakeman says. “We need everyone’s vigilance to help contain this invasive species.”

Take these prevention steps after leaving the water to keep Wisconsin streams healthy:

- Inspect and remove all mud and debris that might harbor snails from your boots, waders, boats and other gear with a stiff brush. If possible, rinse with tap water before leaving the water.
- If possible, let your gear freeze for 6-8 hours or completely dry for five days as the mudsnails can live out of water in a damp environment for five days.
- Drain water from boat, motor, bilge, decoys and other water containing devices before leaving water access (before launching, after loading and before transporting on a public highway).
- Consider having a second pair of waders or boots if it may not be practical to clean your waders when moving from one stream to another.

The mission of the Wildlife Management Program is to work with people to protect and manage Wisconsin wildlife populations and their habitats, and to promote wildlife enjoyment and appreciation for the benefit of current and future generations,” said Tom Hauge, DNR Wildlife Program Director.

Madison – Wisconsin has 18 new wildlife biologists working around state on habitat management, wildlife population monitoring, and including outreach and education from the public on wildlife, hunting, trapping and public recreation on wildlife areas.

The Department of Natural Resources wildlife program was recently able to fill positions around the state, many that have been vacant for extended periods of time.

“We are delighted that this new class of wildlife biologists can fill the gaps in coverage we had across the state and strengthen our service to the citizens of Wisconsin and the wildlife they cherish,” said DNR Secretary Cathy Spobjet. “Our local field staff are vital to building effective wildlife conservation partnerships within the communities and counties they serve.

The new biologists, together with, existinge wildlife biologists and technicians, provide land and wildlife management from prescribed burning to access maintenance on the vast network of Wildlife Management Area’s throughout Wisconsin. Wildlife areas are used by the public for educational activities like school field trips, and recreational uses like hiking, bird watching, hunting, trapping and fishing.

“The mission of the Wildlife Management Program is to work with people to protect and manage Wisconsin wildlife populations and their habitats, and to promote wildlife enjoyment and appreciation for the benefit of current and future generations,” said Tom Hauge, DNR Wildlife Program Director.
Walleye Stocking Records Shattered as First Year of Initiative Ends

HAYWARD — Stocking records for larger fingerling walleyes are being set as the last load of walleyes produced in 2013 under the Wisconsin Walleye Initiative was delivered to Smith Lake in Sawyer County.

The lake was the 100th water body to receive the 6- to 8-inch walleye, often called large fingerling or extended production walleyes, and the 8-inch large walleye fingerlings were stocked at Smith Lake in September, October and November.

That’s more than four times as many large walleye fingerlings as were stocked in Wisconsin, and it was made possible when the federal government changed its stocking guidelines.

Secretary of Natural Resources Duke Snobelen said that the initiative aimed at improving walleye fishing statewide through stocking larger and more mature walleyes is working better, says DNR Secretary Cathy Stepp.

“This is an example of what successful partnerships can accomplish and the kind of cooperation that will make a real difference in fish populations,” Stepp says.

Walleye Initiative

The governor and legislature made 2013 the year for fish for stocking. The increased stocking of larger walleye as is typically produced in September, October and November.

“The governor and legislature made this issue from the U.S. Fish and Wildlife Service (USFWS). However, the company could not avoid the risk of avian deaths by collision with associated meteorological towers, electrical power facilities, and nest abandonment. The MBTA, enacted in 1918, implements this country’s commitments under avian protection treaties with Great Britain (for Canada), Mexico, Japan and Russia. The MBTA provides a misdemeanor criminal sanction for the unpermitted taking of a listed species by any company – in any sector, including the energy industry.

The case represents the first ever criminal enforcement action under the Migratory Bird Treaty Act (MBTA) to result in charges and a plea agreement.

During the Golden East Conference held in Charlotte, N.C., January 18, 2014, is the final day to sell calendars. Christmas is still ahead and the WWF calendar makes a great gift for that person who would be just what would fit.

Anyone else needing more calendars to sell please contact Jennifer as soon as possible before they are all gone. If you have any stubs and monies to turn in please do so now before the rush.

If you know of a club in your area who do not belong to WWF, here is a great way to introduce WWF to them. Stop in and tell them our story and the conversation about who we are and what we do and maybe they will be willing to sell some calendars for you. It’s worth a try and then they also learn about us.

Remember we have a Turow snowthrower with a fifty ice drill in the calendar, along with many guns, monies, and gift certificates and other items.

Thank you, Lil Papping, Calendar chair

President’s Message

Vol. 1 Part VII

By the time you read this we will only have about a month to sell our calendars. January 18th, 2014 is the final day of calendar sales.

As we prepare to wrap up another year, one urge I have to push the sales of the WWF calendar Christmas is still ahead and the WWF calendar makes a great gift for the owner and they will see the calendar throughout the year and remember that you gave it to them. Most taverns easily accept selling our calendar after all we do have a quality calendar with a 365 day run.

When: January 25, 2014
Where: Ho-Chunk Casino, S3214 Hwy. 12, Baraboo, WI 53913
Ticket Information: 608-752-9946
Ticket Price: $125.00 each

2014 Calendars are still available

Wisconsin Wildlife Federation’s Winter Banquet!

C hristmas time is here! If you are looking for that special last minute gift, please contact Jennifer at the office (920-623-9975) immediately to purchase a calendar. This calendar makes a great gift and for that hard to buy person this would just what would fit.

Anyone else needing more calendars to sell please contact Jennifer as soon as possible before they are all gone. If you have any stubs and monies to turn in please do so now before the rush.

If you know of a club in your area who do not belong to WWF, here is a great way to introduce WWF to them. Stop in and tell them our story and the conversation about who we are and what we do and maybe they will be willing to

ี้

Wisconsin Wildlife Federation Statewide Banquet that will be held again at the Ho-Chunk Casino Saturday, January 25th in Baraboo. This is our biggest and best banquet. Don’t be left out in the cold so get your ticket soon. There are a limited number of tickets sold for this banquet. The statewide banquet is the start of the WWF 2014 banquet season so please check your Wisconsin Conservation paper, go to wisfwp.org or call Jennifer at the WWF office to find out when and where the banquet is. These banquets support the mission of the Federation.

Thank you to all of the WWF members, associate clubs and affiliates for all your support this past year.

From the Executive Board and the board of directors we wish everyone a Merry Christmas and a safe and Happy New Year.

John Wagner

Wisconsin Wildlife Federation Statewide Banquet

When: January 25, 2014
Where: Ho-Chunk Casino, S3214 Hwy. 12, Baraboo, WI 53913

President’s Message
The Wisconsin Wildlife Federation invites you to nominate a person or group who has shown outstanding conservation effort and achievement in any of the categories listed. To make a nomination, send one copy of this form and a copy of a résumé. Attach all supporting documents and send to the above address. Deadline for receiving nominations is March 7, 2014.

What topics should resolutions deal with?
• To set and express an opinion of the WWF.
• To set a course of action for the WWF Board of Directors.

Who can submit a resolution?
• Any individual associate or sustaining member – please contact an Associate Director or District Director to submit it on your behalf.
• Any member of the WWF Board of Directors.
• Any individual associate or sustaining member – please contact an Associate Director or District Director to submit it on your behalf.

Why submit a resolution?
• A formal, written motion which follows a specific format.

OFFICIAL CALL FOR RESOLUTIONS!
For presentation at the 2014 Annual Meeting of the Wisconsin Wildlife Federation.

What is a resolution?
• A formal, written motion which follows a specific format.

it was cut for one year after the tree dies. Pruning during winter greatly reduces the likelihood of spreading oak wilt and other tree diseases and minimizes pruning and sorting of firewood. "Many of the recent oak wilt finds in northern Wisconsin likely originated from infected firewood being transported in winter. Also, without leaves on the trees in winter, it is easier to see and prune, broken, cracked or hanging limbs.

It is also important to not move infected firewood. Mature or mature oak trees will be moving in northern Wisconsin likely originated from infected firewood being transported from southern and central Wisconsin where the disease is common," Schwingle says. The first step in protecting your oaks is to get your wood locally. The more you use it, the less likely it is to be carrying pests or diseases new to your area that can emerge to attack your trees, including oak wilt.

The second step you can take to protect your oaks is to make sure the spur does not have a way into your tree. Oak wilt spores need a fresh wound in spring to summer to infect an oak. "Too often, we provide an entry for the oak wilt spores when we prune oaks, make pruning cuts, bump our vehicles into oaks when opening gates at your cabin," Schwingle says. "Almost all other new oak wilt infections are so often found in lake shore developments and other vacation areas where trees are cut down and new ones planted."

Also, he says, avoiding causing even small wounds to your oaks from April 15 to July 15 when spores commonly infect fresh wounds. If you accidentally damage an oak or have prune off a branch broken in a storm, paint or spray wound with a tree dressing or paint to prevent infection. For more information on recognizing, preventing, and controlling oak wilt, search the DNR website dwr.wi.gov for keyword "oak wilt." If you suspect oak wilt killing oaks north of Highway 64 between Sawyer and Forest counties, contact Brian Schwingle at the Merrill office of the DNR.

According to papers filed with the court, Anderson of the Justice Department’s Environmental Crimes Section and prosecuted by Senior Counsel Robert S. Anderson of the Justice Department’s Environmental Crimes Section and prosecuted by Senior Counsel Robert S.

dosage before moving it to a new area. Once bark is loose, there is no longer a threat of moving oak wilt. Oak wilt is common in the southern two-thirds of Wisconsin. In much of northern Wisconsin though, it is still a new and uncommon disease. Since 2010, oak wilt was confirmed for the first time in Lincoln, Dodge, Rock, Sauk, Trempealeau, and Wic- cosities. The disease has not been confirmed in Ashland, Bayfield, Calumet, Door, Douglas, Forest, Iron, Kewaunee, Manitowoc, Price, Sheboygen, Taylor, and Washburn counties. For further information or to search the DNR website dwr.wi.gov for keywords “oak wilt.”

Pruning trees
Trees should be pruned throughout their entire life. During the tree’s first 15 years pay particular attention to forming structural or “scaffold” limbs. Once proper scaffolding has been established, prune for five years to maintain the structure and re- move larger pieces of dead wood. Certified arborists/search.asp.

The DNR pruning brochure offers more detailed, step by step information on pruning. Find it by searching the DNR website dwr.wi.gov for keyword “tree pruning.”

Volunteers Needed to Help Monitor Wisconsin Wolves and other Carnivores

Wolf tracking training sessions and ecology courses set

- **Jan. 12** – Crec Meadows, Grantburg
- **Jan. 18-19** – Treeshaven, Tomahawk
- **Jan. 25-26** – Beaver Creek Reserve, Fall Creek
- **Feb. 1, 2** – Treeshaven, Tomahawk
- **Feb. 8-9** – Sandhill Outdoor Skills Center, Babcock
- **Feb. 15-16** – Tress for Tomorrow, Eagle River

Training sessions in Shiocton and Grandtburg will be from 9 a.m. to 3 p.m., and will have a small fee. Two day trainings vary in price and offer different meal and lodging options.

Details about the Volunteer Carnivore Tracking program and the list of training courses (with details on location and contact information) are available by searching the DNR website for “volunteer carnivore tracking.” Snow track surveys continue to be a critical component in the state’s wolf monitoring program, and provide additional information on other forest carnivores’ populations.

**Wisconsin DNR started a Volunteer Carnivore Tracking program in 1995 to help monitor the state’s wolf population, as well as look for signs of other medium to large carnivores.**

Last winter, 150 volunteers conducted nearly 8,000 miles of snow track surveys in search of wolves and other carnivores. Data they gathered was compiled to assess the state’s wolf population, as well as look for signs of other medium to large carnivores.

Wisconsin DNR is again asking volunteers to participate in monitoring the state’s wolves and other carnivores this winter.

Volunteer trackers are asked to take a track training class and a wolf ecology class. When they take the track training class they will be given the opportunity to sign up for a survey block in northern or central Wisconsin, and are asked to conduct three or more surveys in their assigned block over the winter. Most surveys are done by slowly driving snow covered back roads in search of tracks, but surveys can also be done on snowshoes, cross country skis, or snowmobile. Many trackers work in pairs or groups to complete surveys.

Carnivore Track Training sessions are scheduled for:

- **Dec. 7** – Sandhill Outdoor Skills Center, Babcock
- **Dec. 14-15** – Treeshaven, Tomahawk
- **Jan. 11** – Crec Meadow Visitor Center, Grantsburg

Training sessions at Ashland, Shiocton, Babcock, and Grantsburg will be from 9 a.m. to 3 p.m. There is a small fee for the classes. Training at Treeshaven in Tomahawk on December 14-15 will be led by renowned tracker Dr. James Halfpenny. Cost of that workshop will be $185 to $245, depending on whether you choose the lodging option. Meals are included.

Wolf Ecology classes are scheduled for:

- **Jan. 11** – Crex Meadows Visitor Center, Grantsburg
- **Jan. 18-19** – Treeshaven, Tomahawk
- **Jan. 25-26** – Beaver Creek Reserve, Fall Creek
- **Feb. 1, 2** – Treeshaven, Tomahawk
- **Feb. 8-9** – Sandhill Outdoor Skills Center, Babcock
- **Feb. 15-16** – Tress for Tomorrow, Eagle River

Details about the Volunteer Carnivore Tracking program and the list of training courses (with details on location and contact information) are available by searching the DNR website for “volunteer carnivore tracking.” Snow track surveys continue to be a critical component in the state’s wolf monitoring program, and provide additional information on other forest carnivores’ populations.

Very Important Notice to WWF Affiliate Clubs

The Federation is changing over the timing of the WWF Affiliate Clubs Renewal Period in order to streamline and make the renewal process simpler for all organizations.

So the renewal date for all clubs in the future will always be January 1st of the year the makes the transition to the new system and knowing that many organizations have renewed their 1 year membership already this year, the next renewal date will be January 1, 2015. This will mean no club will lose money in this transition and in fact will mean free services and benefits for most if not all clubs.

You will start receiving renewal notices for your club on September 1, 2014. We have heard that this is the most convenient date for many clubs that often do not meet in summer and it also fits in with work/load timing in the Federation. During this whole transition time you will continue to receive our Wisconsin Conservation newspaper and all WWF services. Please send us by letter or email any changes in addresses and officers so that communications continue to flow between your club and the Federation. Contact information is on our excellent new website.
