Effective October 1, 2013, the Wisconsin Wildlife Federation business office operations will relocate to: 1540 W. James St. Suite 500, Columbus, Wisconsin 53925

Phone: 920-623-9975
Toll Free: 1-800-897-4161

Pembine, Wis. – People hunting on Wisconsin state park properties will be prohibited from shooting from or across certain trails – those trails closed to hunting – and anyone trapping in state parks will be limited to dog-proof or underwater traps.

These modifications to Wisconsin Act 168 were adopted today as emergency rules by the Natural Resources Board at its meeting in Pembine.

Act 168 was approved by the Legislature and signed into law by Gov. Scott Walker in 2012. The intent is to expand outdoor recreation opportunities and to make it easier for people to participate in hunting, trapping and fishing. Among other things, Act 168 expanded hunting opportunities on state park properties and opened them to trapping for the first time.

Act 168 allowed the Department of Natural Resources to prohibit hunting in designated use areas. Following a series of public meetings, the state parks program prepared hunting maps for all state park properties indicating areas closed and open to hunting. Closed areas include those parts of the park within 100 feet of designated use areas, such as parking lots, campgrounds and picnic areas, as well as property within 100 feet of certain trails. The Natural Resources Board approved these maps at its December 2012 meeting.

The emergency rule adopted today clarifies that it is illegal for a hunter standing in an area open to hunting to shoot across a trail closed to hunting or across any area within 100 feet of such a trail.

Under its authority to restrict hunting in parks for safety reasons, the board previously specified that hunting can take place in state parks in the spring from April 1 through the Tuesday nearest May 3, and that hunting and trapping can take place in the fall from Nov. 15 through Dec. 15. An exception allows archery hunting to continue through the Sunday nearest Jan. 6.

At that same meeting the board directed DNR staff to establish emergency rules prohibiting the discharge of firearms from or across designated trails and to restrict trappers to the use of dog proof or underwater traps.

“These are common sense rules that most hunters would abide by anyway for safety reasons,” said Dan Schuller, director of the Wisconsin State Parks program.

The prohibition will prevent the discharge of firearms, air-guns, bows and crossbows from or across any designated hiking trail on a state park property map. The prohibition was already in place on any Ice Age National Scenic Trail property.

The rules use an existing trap-type definition known as “enclosed trigger trap” that meets the requirements of being a “dog proof trap.” These are traps with a pull-activated trigger inside an enclosure with a recessed opening. The rules allow trapping under normal regulations in certain situations where the traps are submerged in water.

The emergency rules will be in effect when hunting and trapping opens on Wisconsin state park properties Nov. 15. The DNR is in the process of promulgating a permanent rule that will contain language identical to this rule. The permanent rule will be the subject of public hearings and will need to be approved by the Natural Resources Board at a future meeting.

New Rules Prohibit Shooting From or Across Trails on Wisconsin State Park Properties

Rules also allow only dog-proof or underwater traps

Pembine, Wis. – People hunting on Wisconsin state park properties will be prohibited from shooting from or across certain trails – those trails closed to hunting – and anyone trapping in state parks will be limited to dog-proof or underwater traps.

These modifications to Wisconsin Act 168 were adopted today as emergency rules by the Natural Resources Board at its meeting in Pembine.

Act 168 was approved by the Legislature and signed into law by Gov. Scott Walker in 2012. The intent is to expand outdoor recreation opportunities and to make it easier for people to participate in hunting, trapping and fishing. Among other things, Act 168 expanded hunting opportunities on state park properties and opened them to trapping for the first time.

Act 168 allowed the Department of Natural Resources to prohibit hunting in designated use areas. Following a series of public meetings, the state parks program prepared hunting maps for all state park properties indicating areas closed and open to hunting. Closed areas include those parts of the park within 100 feet of designated use areas, such as parking lots, campgrounds and picnic areas, as well as property within 100 feet of certain trails. The Natural Resources Board approved these maps at its December 2012 meeting.

The emergency rule adopted today clarifies that it is illegal for a hunter standing in an area open to hunting to shoot across a trail closed to hunting or across any area within 100 feet of such a trail.

Under its authority to restrict hunting in parks for safety reasons, the board previously specified that hunting can take place in state parks in the spring from April 1 through the Tuesday nearest May 3, and that hunting and trapping can take place in the fall from Nov. 15 through Dec. 15. An exception allows archery hunting to continue through the Sunday nearest Jan. 6.

At that same meeting the board directed DNR staff to establish emergency rules prohibiting the discharge of firearms from or across designated trails and to restrict trappers to the use of dog proof or underwater traps.

“These are common sense rules that most hunters would abide by anyway for safety reasons,” said Dan Schuller, director of the Wisconsin State Parks program.

The prohibition will prevent the discharge of firearms, air-guns, bows and crossbows from or across any designated hiking trail on a state park property map. The prohibition was already in place on any Ice Age National Scenic Trail property.

The rules use an existing trap-type definition known as “enclosed trigger trap” that meets the requirements of being a “dog proof trap.” These are traps with a pull-activated trigger inside an enclosure with a recessed opening. The rules allow trapping under normal regulations in certain situations where the traps are submerged in water.

The emergency rules will be in effect when hunting and trapping opens on Wisconsin state park properties Nov. 15. The DNR is in the process of promulgating a permanent rule that will contain language identical to this rule. The permanent rule will be the subject of public hearings and will need to be approved by the Natural Resources Board at a future meeting.

Accessible Waterfowl Hunting Blind Now Available on Horicon Marsh Wildlife Area

Horicon, Wis. – Hunters with disabilities are now able to reserve an accessible hunting blind on the Horicon Marsh Wildlife Area.

The Jack Nugent Memorial Disabled Waterfowl Blind can be reserved by calling Horicon Marsh at 920-387-7860. The blind can be reserved one week in advance and is for the exclusive use of disabled hunters and a single helper. There is no charge to reserve or use the blind and the hunter’s helper may also hunt.

Additional information on waterfowl hunting on Horicon Marsh is available on the DNR website at dnr.wi.us using the keywords, hunting on Horicon Marsh.

“Thanks to the efforts of Ducks Unlimited and Wisconsin Waterfowl Association, we were able to construct this brand new blind on the Burnett Impoundment on Horicon,” said Paul Samec, DNR wildlife biologist for Dodge County. “The blind is named after the late Jack Nugent, who was an avid waterfowl hunter and conservationist.”

Madison, WI 53777-1615

Re: Comments Regarding Gogebic Taconite’s Proposed Iron Mine in Ashland and Iron Counties

Mr. Lynch:

The Wisconsin Wildlife Federation is comprised of 185 hunting, fishing, trapping and forestry-related groups located across the state including Ashland and Iron County. The Federation’s obvious interest in this project relates to the fish and wildlife habitat on the proposed project site including its forests, wetlands, streams and lakes. Our interest extends outside the project boundary to include the entire Bad River watershed, the finest remaining watershed in the state that has outstanding fish and wildlife habitat. This interest has recently been shown by the fact that 42 members of our Board of Directors did a three-day tour and seminar on the project in Ashland and Iron counties in August of this year. The Federation, although having deep concerns for the future of the natural resources that may be impacted by the project, has to date remained neutral on the project. We pride ourselves on being a fact-based organization driven by scientific information. As you will see from our comments, that is why it is so important for the Department of Natural Resources to do a superlative job in gathering fact-based information about the impacts of the project on the environment.

We will shorten our comments and your reading workload by endorsing and associating ourselves with the detailed comments filed by our partners the Wisconsin Wetlands Association and Clean Wisconsin.

We are focusing our comments on the following areas related to the needful pre-application field work that needs to be done. In street jargon, in our opinion, it is the whole ball game. If done correctly, the state and federal governments will be able to make the correct ultimate decision, if not; some of the most valuable natural resources in this state are subject to severe degradation.

1. A thorough and complete hydrogeological survey of the project site and areas up and down the watershed. It is our belief that the ground water hydrology in this area is extremely complex with both macro watershed and micro watershed impacts. There needs to be a thorough knowledge of the impacts of the mine and its affiliated components both on the Bad River downstream, the valuable streams lying in and adjacent to the proposed project region, and the groundwater impacts of the project on the area adjacent on wetland and lakes. The ground water model for this project must be informed by numerous strategically placed wells and after the model is completed by the company, the model must be fully analyzed and verified for actual pumping tests. Until this occurs DNR should not allow the project application to proceed forward.

2. The Federation is calling for a complete and thorough study of the ore body and its overburden. The WWF has been informed by seasoned and credible geologists, that the ore body and its overburden have lenses outcropping at the ore body that differ from one location to another. One example is the possibility of a gemmular lens in part of the ore body with its potential asbestos concerns. While the company has access to extensive drill holes, it has not made them available to the public scrutiny and apparently not to DNR either. If the sharing of that information, the Federation is asking that as part of its pre-application process, the DNR require that the company do additional borings throughout the proposed ore body so that an accurate chemical analysis can be done to determine the content of any waste material that will be disposed of in this highly sensitive watershed.

3. The Federation is calling for a thorough analysis of the wetlands and small tributaries and ponds on the project site that provide a valuable source of cold water to Tylers Fork and Bull Gus Creek. These extremely valuable streams used by sports anglers and it is our belief that by elimination of the wetlands, ponds and streams feeding those bodies of water, there will be major impact on the quantity and quality of the water in those streams. With having that data, the impacts of the project on the contaminant measured.

4. The Federation is calling for a thorough investigation of the fauna and flora on the site.

5. The Federation is calling for a detailed study of the recreational uses of the project site, including hunting, fishing and trapping. Sportsmen and women will be very interested in seeing what the loss of this area means to them in the most direct way.

Mr. Lynch, the sportsmen and women in this state have great confidence in the people who make decisions on the project site that the state’s top officials are counting on you to assure that the best possible studies are done to determine what natural resources are at stake in this project and what impacts the project will have on those resources. The legislature has put tight constraints on how you do your job, but the Federation is counting on you to take whatever time is necessary to reach a final decision in this matter.

Sincerely yours,
Georg Meier, Executive Director
Wisconsin Wildlife Federation

**PRESS STATEMENT FROM JOHN WAGNER, WWF PRESIDENT**

**WWF Applauds Governor’s Decision to Rescind Sporting Heritage Grant**

The Wisconsin Wildlife Federation today applauds Governor Walker’s decision directing the Department of Natural Resources to rescind the recently issued Sporting Heritage Grant for the project on the site.

The grant of the game to increase the recruitment and retention of hunters, anglers and trappers in the State of Wisconsin is one of the major concerns and importance to the Wisconsin Wildlife Federation, its members and all of the excellent sporting groups in the state. Unfortunately the highly questionably process, the narrow criteria for grant applications and the inadequate public noticing of the grant by the DNR raised substantial concerns among a large number of sportsmen and women across the state. Continuation of the grant under those circumstances would have resulted in this important new initiative being started under a series of suspicion and distrust to the sporting community.

The WWF calls on the legislature to reissue the $500,000 to the for the sporting heritage grant to allow the DNR to rescind the $500,000 grant and make a mannequin that involves the great breadth of Wisconsin’s sporting organizations involved in hunting and angling and the retention of the hunting and fishing in the state. The funding should be used to bring sporting organizations together in an effort to give a critical mind and not divide them.

The WWF also in a letter today to DNR Secretary Cathy Stepp requested that the DNR bring together and host a meeting or work with the Wisconsin’s sporting organizations interested in retention and recruitment to outline a collaborative effort to help frame many state and local organizations in an effective and cost-effective approach to solve this serious issue. Such organizations should include at a minimum the WWF, the Conservation Congress, Kids and Mentors Outdoors (KAMO), Pheasants Forever, the WWF, Ducks Unlimited, Wisconsin Trappers Association, Wisconsin Waterfowl Association, Wisconsin Bear Hunters Association, Wisconsin Bow Hunters Association, Safari Club International and Friends of the Bad River.

As just one illustration of many potential recruitment and retention efforts, in the last year the WWF and the DNR have entered into a strategic partnership to spread the highly successful hunting recruitment strategy that has been put into place by Kids and Mentors Outdoors. This strategy involves going beyond youth learn to hunt programs and outdoor skills days and has created several local chapters of KAMO that connect long-term adult mentors with young men and women hunting and related conservation organizations. The Wisconsin Wildlife Federation is working with KAMO in holding joint workshops with the 185 hunting, fishing and trapping related clubs that belong to the Federation to get the $500,000 for these chapter KAMO chapters. Non-WWF sporting clubs will be openly invited to the workshops.

We are extremely pleased with this unfortunate event and come up with a positive and cooperative recruitment strategy resulting in an increase of Wisconsin’s hunting, fishing and trapping community.

The Wisconsin Wildlife Federation and its members and all of the excellent sporting groups in the state have great confidence in the people who make decisions on the project site that the state’s top officials are counting on you to assure that the best possible studies are done to determine what natural resources are at stake in this project and what impacts the project will have on those resources. The legislature has put tight constraints on how you do your job, but the Federation is counting on you to take whatever time is necessary to reach a final decision in this matter.

Sincerely yours,
George Meyer, Executive Director
Wisconsin Wildlife Federation

**President’s Message**

Vol. I Part V

October is one of the best months of the year. When October comes around the leaves start turning colors, geese start flying their migration south, some mornings there’s frost on the pumpkin, some snow storms may sprawl and hunting is starting to get into full swing. If you’re hunting, growse, ducks, pheasant, tur- key, deer, bear, wolf and/or trapping you’re probably enjoying what you love best. One of my best hunts is archery for the elusive whitetail buck. Every year I can’t wait for the rut to start during the archery season.

This year starting October 15th will be the second hunting/trapping session for wolves in the State of Wisconsin. Federal de-listing of wolves occurred on January 21, 2011, following years of de-listings and re-listings resulting from a number of court cases, even though the Midwest wolf population exceeded recovery goals for many years. The Wisconsin Wildlife Federation is one of many organizations that have appropriated could be of a major boost in advancing such an effort with a well-developed strategy involving all of Wisconsin’s hunting, fishing and trapping community.

There’s something special about hunting and at the same time, hunters do need to keep safety in mind at all times during the hunting season. Let me remind you of the 4 basic rules of hunting.

- The 4th and last rule of hunting is to make sure you’re well prepared.
- The 4th and last rule of hunting is to make sure you’re well prepared.

Central Wisconsin Bow Hunters Can Assist with CWD Testing in Three New Focus Areas

Bow hunters who harvest adult deer in one of the surveillance areas prior to October 10 can help the surveillance effort and get their deer tested for free, by removing the head with at least three inches of neck attached, freezing the head head and contacting DNR. They can then call ahead and arrange to drop off the head at one of these three offices:
- Mead Wildlife Area Headquarters, S2148 County Road S, Milladore, 715-457-6771
- WI Rapids Service Center, 473 Griffith Avenue, WI Rapids, 715-421-7813
- Adams-Friendship Ranger Station, 532 N. Main Street, Adams, 608-539-4819

Prior to Oct. 10, DNR will publish a list of cooperators in these surveillance areas who will take samples from white-tailed deer after that date. Some cooperating taxidermists can remove a lymph node for sampling with out having to remove the head. Other cooperators will sample by removing the head. Locations and hours of service will be published, given to the media and posted on our “CWD sampling” web page.

The CWD tests are free for these hunters. Anyone submitting a head for testing will receive their test results in three to four weeks. Individuals interested in learning more about the disease can visit the DNR web page at dnr.wi.gov and type “CWD” into the search box. Information regarding collection stations will also be made available throughout the season on the DNR website.

2013 Deer Hunter Wildlife Survey Begins

The opening of the archery deer season on Sept. 14 marks the beginning of the 2013 Deer Hunter Wildlife Survey. "Deer hunters often ask if there is a way they can tell state wildlife officials what they are or are not seeing from their deer stand, this survey provides them with the means to do that," said Jay Watson, wildlife survey technician with the Department of Natural Resources. "With the Deer Trustee report recommending more input from the hunting public on herd status, this tool provides the hunter with an excellent way to communicate their sightings," Watson said. "All they need to do is record the date, number of hours, county, deer management unit, weather conditions, and the type and number of animals observed each day of deer hunting. Hunters can also enter their email address along with their observations and I will send them an email summary of their hunting activity at the end of the survey period."

Hunters can find survey instructions, record sightings, and view survey results online at the Wisconsin Deer Hunter Wildlife Survey page by searching the DNR website for "deer hunter wildlife survey." A tally sheet is also available for times when hunters do not have access to a computer.

Wildlife officials ask that hunters record all of their hunting activity throughout the deer season, even if no wildlife sightings were made during a hunt. The survey period ends January 2014. These observations have provided the DNR with an index to abundance for many wildlife species.

Many other states in the Midwest and around the country use these types of surveys to gather hunter input into deer and other wildlife abundance. This is the fifth year of the survey and deer hunters are asked to report their field observations of a variety of wildlife species, hunting conditions and hours spent pursuing game. This year 17,000 deer hunters were selected at random and sent a letter inviting them to participate in Deer Hunter Wildlife Survey. However, if you were not one of the hunters selected to participate we still encourage your participation to help provide insight into Wisconsin’s deer herd.

“Whether you hunt opening weekend or all season long, this extra monitoring of our state’s wildlife provides us with thousands of observations,” Watson said. The Deer Hunter Wildlife Survey overlaps another citizen-participation survey Operation Deer Watch started Aug. 1 and runs through Sept. 30. The primary objective of Operation Deer Watch is to determine trends in deer reproductive success by reporting does and fawns seen together during the late summer and early fall.

Trail Camera Photos Wanted

The wildlife surveys program is also interested in photographs of rare or endangered species hunters may have captured on their trail cameras. Photos can be emailed to DNR Wildlife Management. This information will help document their existence and location within the state. Trail camera photos can be viewed the DNR online trail camera gallery.

Questions about the Wisconsin Deer Hunter Wildlife Survey, accessing the tally sheet, reporting your observations, or the results of the survey, can be referred to Jay Watson at 608-221-6360.

**Proposals Outlined to Modify Coded Wild Animal Laws and Policies**

A proposal to modify Wisconsin’s captured wild animals policy is ready for review and voting. It comes after Gov. Scott Walker called on the secretaries of the Department of Natural Resources and the Department of Agriculture, Trade and Consumer Protection to examine the current laws and policy.

The proposed changes that will go before the Natural Resources Board in September include:

- **Immediate reintroduction of wild animals into the wild.**
- **A licensed rehabilitator to rehabilitate wild animals for reintroduction to the wild.**
- **Ability of a licensed rehabilitator to keep the animal if it is safe and healthy to live in the wild.**
- **A wild animal, if it is safe and healthy to live in the wild, is only released into the wild.**
- **A wild animal, if it is safe and healthy to live in the wild, is only released into the wild.**

If a wild animal cannot be immediately released into the wild, it must be safely released after rehabilitation, which would be taken by a licensed rehabilitator. In the case of the deer, following rehabilitation, a deer which originated in a CWD zone could only be reintroduced into a CWD zone.

**State Stocking Trucks Rolling with Walleye Funded by State Budget Initiative**

More and larger fish headed to more Wisconsin waters.

**WODDRUFF** – The Wisconsin Walleye Initiative is on a roll!

The Wisconsin Walleye Initiative was adopted in 2009 and is authorized to produce and promote an additional 100,000 walleye fingerlings per year of the larger walleye, split dictated by limited budgets, because the smaller walleye are much cheaper to produce. The smaller walleye, known as “small fingling,” are $1 to 2 inches at stocking and are cheaper to produce because they feed on plankton that grow on algae for may and feed on small zooplankton which are kept. To keep walleye longer at the hatcheries so they grow to large finning size, DNR must buy and feed the young walleye minnows and keep the young walleye minnows in the water longer.

The Wisconsin Walleye Initiative gives DNR the ability to keep more walleye longer at the hatcheries and stock them out at large finning size with more clumpings and clumping size.
2014 National Archery in the Schools World Tournament to be Held in Madison

MADISON The 2014 National Archery in the Schools Program World Tournament will be held July 11-13, 2014 at the Alliant Energy Center in Madison, Wis., the Wisconsin Department of Natural Resources and the Madison Area Sports Commission have announced.

The National Archery in the Schools Program is an in-school curriculum for students in grades 4 through 12. Many participating NASP schools create after school programs and archery teams, in addition to their in-school archery programs. These archers and teams from participating NASP schools then participate in various local, regional and state tournaments.

This is the 11th Annual NASP World Tournament. Archers and teams qualify for a NASP national tournament based on scores they achieve at their state tournaments. United States archers and teams then qualify for the NASP world tournament based on their scores at the NASP national tournament. Archers and teams from other NASP participating countries follow a similar qualification process through their respective provincial and national tournaments.

“We expect archers from approximately 25 states to participate in the 2014 NASP World Tournament as archers from Canada, South Africa, Namibia, Zimbabwe, and Mongolia,” said Dan Schroder, NASP Coordinator for the DNR.

The 2013 NASP world tournament was held in St. Louis Missouri. The four prior world tournaments were held in the ESPN Wide World of Sports Complex at Walt Disney World, near Orlando Florida. Participation from 2012 to 2013 increased by 134%. There were 2,907 archers at the 2013 world championship.

For information about the National Archery in the Schools Program search the DNR website “NASP” or visit www.naspschools.org for NASP tournament information please visit www.nasp-tournaments.org.

Hi Joe,

I just wanted to say thank you so much for what you have done for Jacob and “thank you” truly doesn’t even come close to telling you how we feel. I can’t begin to tell you how much it has meant to us what you have done for him. You gave him a once in a lifetime opportunity that we would never have dreamed he would have been able to do. He craves some time away from chemo and some excitement. Orka is just that. And that means so much to him.

He is looking forward to deer hunting this fall and turkey. Next, A BIG BUCK!

Words cannot express how grateful we are to you and everyone else who has helped to give him this memory he will never, ever forget!!!

He is looking forward to deer hunting and can’t wait to try his luck at that.

We keep telling him that hunting usually isn’t like this and not everyone gets a bear or deer their first time, but he doesn’t care he just knows he wants to do it and see what happens.

THANK YOU AGAIN, WE TRULY CAN’T THANK YOU ENOUGH!!!

Butch and Brenda Van Schyndel

Logging Company Billed $600,000 for Negligence in Germann Road Fire

After a nearly four-month investigation by the Department of Natural Resources into the cause of the Germann Road Fire, a commercial logging company will be billed for more than $600,000 after the investigation determined the company’s negligence caused the forest fire to start and spread.

The fire was the state’s largest in 33 years and burned 7,442 acres in Douglas County. The fire began around 2:45 p.m. May 14 and burned an area nearly 10 miles long and a half mile wide before it was contained about 9 p.m. on May 15. Forty-seven structures were destroyed, including 17 homes or cabins, in the Towns of Gordon and Highland.

A logging crew was harvesting timber on industrial timber lands when the fire began. At the time, the crew acknowledged the fire had started at the time the crew had attempted to use the water system on board the Timberjack 840. This manufacturer of the Timberjack 840 intends the water system to be used for extinguishing fires caused by the equipment. The presence of this system and the attempt to use it was basically concealed from investigators until June 27 when it was tested with the department, insurance investigators, attorneys, and engineers present. At that time it was discovered that the water tank was full and the hose and nozzle stretched approximately 9.5 feet in front of the cutting head. However when tested, the air pressure system was at 2 pounds per square inch. The owner’s manual indicated a pressure of 95 psi to operate properly. The machine was also mobile.

The investigation determined that the crew had attempted to use the water system to extinguish the fire and the water “dribbled out” since it had not been pressurized. The logging company officials also said they didn’t know if the pressurized water system worked as they had never tested it.

On July 24, the equipment was tested again with insurance investigators, attorneys, engineers, and company officials present. The pressurized water system was charged to just over 50 psi. The system sprayed water for 5 minutes and 40 seconds. The maximum distance was 15-plus feet from the end of the nozzle, the system sprayed water at 10 feet for almost two-and-a-half minutes before it started to weaken.

The fire extinguisher on the Timberjack 840 was manufactured in 2001. It appears to have had its six-year service done in 2007. The last recorded inspection was May 2010. It was supposed to be inspected annually. According to a fire extinguisher expert, it appears the fire extinguisher worked mechanically, however, it was not clear if it was used properly.

The investigation finally determined that while the cause of the forest fire was accidental and efforts were made to suppress the fire by the logging crew, steps should have been taken in the preparedness and maintenance of the equipment.
