

Resolution dog training study

Whereas, hunting continues to be a major component of the professional management and conservation of wildlife in the United States; and

Whereas, the use of dogs while hunting has long been recognized as an important management tool that conserves wildlife species directly and indirectly; and

Whereas, for centuries various hunting dog breeds have been developed for the pursuit of game including upland and waterfowl bird species and the trailing of mammals by hounds; and

Whereas, the breeding, training and use of dogs to locate, pursue and retrieve game in this country has been a long-standing tradition passed down through families for many generations; and

Whereas, the training and use of hunting dogs has come under heavy opposition in some areas of the country; and

Whereas, restrictions to reduce or eliminate the training and use of hunting dogs are in part a move to end a longtime legal method of harvesting game; and

Whereas, the Natural resources code states;

NR1.11(12) Strongly encourages the use of well trained hunting dogs in the pursuit and retrieval of game; that extensive training and field trial competition provide hunting dogs which are proficient at finding and retrieving more game; and that the department will actively participate in programs which assist and encourage the training of hunting dogs including the designation and management of specific state controlled lands for trials and training provided this use does not conflict with the primary purpose of the property.

NR1.18(11) DOG TRIALS AND DOG TRAINING. The use of captive game farm birds and mammals for dog trial and training activities is consistent with sound resource management principles and provides opportunities for hunters to improve their dog handling skills and the dog's performance during periods closed to hunting. and;

Whereas, dog training and trialing permits are being denied and rescinded based on supposition of harming nesting birds without any science based fact. And;

Whereas, nationally there is no study available to define the effects on birds of dog training or trialing during the time that birds are nesting.

BE IT RESOLVED, that the Wisconsin Wildlife Federation at its annual meeting held in Stevens Point on **April 16-18, 2010** petitions the Department of Natural Resources to take needed action to initiate a scientific study, to study the effects of dog training and trialing on nesting birds.
