More than half a million acres of wild turkey habitat restored and enhanced and nearly half a million acres of pheasant habitat restored and enhanced, mostly on lands open to public access for hunting are among the projects Wisconsin sportspeople have contributed to through the purchase of state wildlife stamps.

For many years, Wisconsin’s Wild Turkey, Pheasant, and Waterfowl Stamp programs have provided opportunities for wildlife and habitat management and hunting. Currently, work is about to begin for the most recent cycle of stamp-funded projects.

Turkey, pheasant, and waterfowl hunters are required to purchase a species-specific stamp in order to legally harvest these game birds in Wisconsin, with income supporting habitat management and restoration projects, education, research, equipment purchases, and the administration of species management programs. Non-hunters can also purchase habitat stamps without purchasing a hunting license, thereby contributing to these efforts.

Wild Turkey Stamp funds have been providing opportunities for turkey management in Wisconsin since 1996. Sales of the stamp bring in approximately $750,000 annually, and applications for projects benefitting the state’s turkeys are solicited every other year.

“Some fantastic projects will be undertaken in 2016 and 2017,” says Scott Walter, upland wildlife biologist for the Wisconsin Department of Natural Resources. “We’ll investigate the influence of landscape characteristics on turkey distribution, restore oak savanna and forest habitat, and create education and outreach materials to further Wisconsin’s wild turkey management program, and that’s just a sample of the projects selected for funding.”

Money from each of the stamp programs is available for projects that are administered by DNR personnel, conservation groups and organizations, and other units of government. Work is about to begin for the 2016-2017 fiscal biennium, and members of the DNR tur- key advisory committee recently approved $1.4 million in funding for nearly 50 projects across the state.

Since 1996, $14.5 million has been allocated from the sale of Wild Turkey Stamps funding nearly 1,100 projects statewide, and $12.3 million in cost-share dollars have been allocated to partners for turkey management activities, resulting in more than half a million acres of wild turkey habitat restored and enhanced, mostly on lands open to public access for hunting.

Wisconsin’s Pheasant Stamp funds have supported ring-necked pheasant management and hunting opportunities since 1992. On average, annual revenues exceed $375,000, with 40 percent of pheasant stamp revenues ap- plied to the restoration and management of wild pheasants in the state. The remaining 60 percent is directed toward the management of the state game farm, which raises pheasants for release on public hunting grounds each fall.

For the 2016-2017 funding cycle, members of the DNR pheasant advisory committee have approved a total of $440,000 in funding statewide. Projects will be undertaken by the DNR, Bureau of Wildlife Management and Natural Heritage Conservation, with additional funding going to external partners such as Pheasants Forever and Wings Over Wisconsin.

Wisconsin’s contribution toward Manitoba habitat projects in the next two years, benefitting migratory waterfowl that pass through Wisconsin during migration. Ducks Unlimited, and Delta Waterfowl Foundation will be responsible for implementing these Canadian habitat projects, using 33 percent of revenues generated by the Wisconsin Waterfowl Stamp.

“Purchasing a Waterfowl Stamp is a great way to support waterfowl and wetland conservation here in Wisconsin and in Canada,” said Jason Fleener, DNR wetland ecologist. “The funds not only benefit waterfowl populations for hunting purposes in the state, they also benefit many other birds and wildlife, improve water quality, and provide flood control. Wisconsin’s contribution toward Manitoba habitat is a good investment that manages critical habitat in one of the continent’s best breeding duck areas, while strategically stretching the dollar and leveraging funds from other conservation partners.”

Over the next two years, $835,000 will be allocated to 34 waterfowl habitat projects in Wisconsin. Projects will mainly involve wetland restoration and maintenance along waterfowl impoundments.

Additionally, several major projects in Mani- toba, Canada will occur over the next two years, benefitting migratory waterfowl that pass through Wisconsin during migration. Ducks Unlimited, and Delta Waterfowl Foundation will be responsible for implementing these Canadian habitat projects, using 33 percent of revenues generated by the Wisconsin Waterfowl Stamp.

“Purchasing a Waterfowl Stamp is a great way to support waterfowl and wetland conservation here in Wisconsin and in Canada,” said Jason Fleener, DNR wetland ecologist. “The funds not only benefit waterfowl populations for hunting purposes in the state, they also benefit many other birds and wildlife, improve water quality, and provide flood control. Wisconsin’s contribution toward Manitoba habitat is a good investment that manages critical habitat in one of the continent’s best breeding duck areas, while strategically stretching the dollar and leveraging funds from other conservation partners.”

By George Meyer, Executive Director

B y now I suspect that most people know that the recent state budget as first proposed by the Governor eliminated the only state wide conservation budget in several decades. Many of you weighed in and contacted your legislators to improve and restore key measures. Now that the ink is dry on the paper how does the final budget look?

1. Keeping the Natural Resources Board Authority. The Governor proposed to totally eliminate the Natural Resources Board as an advisory board. This would have substantially increased the opportunity for average citizens to influence conservation policy in the state and increased the role of politics in natural resource management in the state. The Board's authority was restored in the final budget.

2. Eliminating Stewardship Land Purchase funds. The Governor proposed to totally eliminate a land purchase program for state parks. The Legislature restored funding for the program to $33 million, roughly in line with what had been available in previous years.

3. Cutting DNR positions. The Governor proposed and the legislature agreed to eliminate 95 DNR staff positions, out of an agency complement of roughly 2,600. The agency has lost a total of 700 positions in the last 20 years. Of those 95 positions, 59 were fish management, wildlife management, law enforcement and research scientists. Eighteen research scientists were cut from the Department, one-half of the total research scientists. Research science is the fundamental building block for sound natural resource management in the state.

4. Cutting DNR positions. The Governor proposed to totally eliminate the remaining 5 million state tax dollars used for the state's Great Lakes programs. Roughly 25% of the funds needed for this legislation. He proposed to raise park camping and entrance fees an amount to recoup $1.4 million. This would have resulted in a substantial state park service reduction. The Legislature approved an increase in entrance and camping fees to recoup the full $5 million state tax dollar cut. This would have put a strain on the park system the only state park system in the country. Furthermore, it would have made the Wisconsin Park system the only state park system in the country operating totally on a fee-based system. Past efforts to do in other state programs running totally on a fee-based system have failed. The Legislature restored funding for those important county staff $800,000, roughly 9% of the Legislature restored $675,000.

5. County Shore Land Zoning. The Legislature eliminated the provisions of thirty County Shoreland Zoning Ordinances that went beyond the minimum state shore land zoning standards. This substantially reduces the protection of fish and wildlife in Wisconsin's lakes and streams.

6. Recycling Support for Local Governments. The Governor proposed to cut recycling grants to local communities by $4 million, roughly a 22% reduction. The Legislature supported this cut.

7. Cuts to the Wisconsin Conservation Education Board. The Governor proposed a substantial reduction to the Wisconsin Conservation Education Board. The WCEB was established in 1990 to provide environmental education programs in pre-Kinder garden, 12 schools and communities throughout Wisconsin. The Legislature restored the WCEB. The WCEB's function was to provide environmental and forestry education grants for such programs in the state. It was funded by a surcharge on environmental and conservation violations. The Board was eliminated effective 2011 and the grants are being phased out during that period.

8. Forest harvesting practice. The Governor proposed limiting the DNR's Division of Forestry's authority to oversee cutting notices for timber harvest on Managed Forest Lands if the cuts are overseen by DNR certified private forest managers. The Legislature approved the proposal.

9. Ballast Water Fees. A large number of aquatic invasive species have entered the Great Lakes and ultimately inland waters through the ballast water of seagoing ships entering the Great Lakes through the St. Lawrence Seaway. The Legislature authorized the DNR to collect fees for two years from ships discharging ballast water into Wisconsin waters. The fees are for the purpose of DNR regulation of the ballast water discharge. The Governor proposed to make the fees permanent. The Legislature approved that change.

Thank you all to those contacted their legislators and worked to improve the conservation portions of 2015-2017 state budget.

President’s Report

August 2015

WWF Director Appointed to the Wisconsin Environmental Education Board

Jim Swanson, WWF District 3 Director, was appointed to serve on the Wisconsin Environmental Education Board by Raymond Cross, President of the University of Wisconsin system for a one year term. Jim will be serving as the conservation/environmental organization representation on the Board. Jim will be replacing Ruth Ann Low, former Business Manager, Educator and Director of the Mackenzie Environmental Center for the Wildlife Federation. Jim is an outdoor writer and educator and retired alternative school teacher. He was named the Outdoor Conserva tion Educator of the Year by the WWF in 2011. Jim enjoys teaching kids and their parents to shoot muzzle loaders. Over the years, he has taught over 6000 kids and adults to shoot muzzle loaders in various locations all over Wisconsin. Jim was the advisor for the Sharing Our Resources Club at Monomie Middle School. The students in the club participated in a wide variety of outdoor activities from camping, treasure hunts, to the shooting sport of fly fishing to bird watching. Jim also incorporated outdoor adventure education in the curriculum at the alternative school where he was the lead teacher. The adventure education activities culminated in a wilderness camping trip in the Chequamegon National Forest. Jim is active in a wide variety of outdoor ac tivities including muzzle loader shooting, muzzle loader hunting, canoeing, fishing, outdoor cooking and bicycle road trips.

The Wisconsin Environmental Education Board is a state board, affiliated with the College of Natural Resources at the University of Wisconsin Stevens Point, and whose focus is to promote the teaching of environmental education throughout the state.

I am really pleased to say that our Range has done such a great job for the Federation and our Mission of be ing the voice of the sportmen and women of Wisconsin.

I am really pleased to say that our Executive Director, George Meyer, has agreed to stay with the Federation for two more years. George has done a wonderful job for the Federa tion and all sportmen and women throughout Wisconsin. We are fortu nate to have him on Board. Thanks to George for all you have done for us. Respectively,

George Borchert, President

W W F

J w, another month has gone by. Where has summer gone? Hopefully all of us are really enjoying it with friends and families.

I would like to start out by thank ing Thrivent Insurance and their Thrivent Cares program for their wonderful contribution to the Fed eration’s Conservation Leadership Corps program.

The end of summer means that it is Calendar time again, when we are all asked to get our calendars distributed to all of the great individuals and businesses who have done such a great job for the WWF Calendar. As you plan to sell calendars, think of this one location that may be willing to become a selling location. We have drop shipped to those sellers who have requested it. If you would like to have calendars sent to you or another location, please notify Kim Lang in the Office at 920-623-9975.

The Calendar once again has 120 great firearms and a minimum daily price of $100. There are some great new prizes on the Calendar this year, including a spring Snow Goose Hunt for up to eight people, a five hour fishing charter for up to 6 people out of Port Washington, a day-long guided canoe trip on the Lower Chippewa River, to name a few. Be sure to support our sponsors that are listed in the Calendar. Thank them for their sponsorship whenever you can. We can continue the proceedings with our loyal sponsors who are listed in the Calendar.

The Proceedings of the Federation are important to the success of the Federation and our Mission of being the voice of the sportmen and women of Wisconsin.

Industrial Sand Mining

Given the interest in hydrofracking and Wisconsin’s abundant supply of raw materials, the topic of sand mining in Wisconsin has generated interest from regulators, legislators, local governments and the general public.

Regulations
Industrial sand mines must follow the same requirements as other nonmetallic mining operations in Wisconsin, including getting necessary air and water permits and following state reclamation laws.

Mining and processing operations may have onsite repair and maintenance facilities which generate small amounts of hazardous waste (hydraulic oil, waste oil, cleaning solvents and anti freeze) and may be subject to the hazardous waste regulations.

For more Mining information Search the DNR website, dnr.wi.gov for the Key Words Sand Mining.

Editor’s Note:
Board of Director Meeting
“On the Road!”

Special Agenda: Wisconsin’s Sand Mining Activity

The August 2015 WWF Board of Directors meeting will be held in Eau Claire August 14/15 – The Meeting/Educational Seminar begins at noon on Friday – Agenda includes “Frac” Sand Mining.

Speaker(s): Chicago – Speaker(s) to be announced.

WWF Editor Daniel A. Gries

La Crosse Staffer Chosen as New Agency Sand Mining Lead

WDNR 7/15

ADISON – Roberta Walls, a veteran Department of Natural Resources staff person working in the La Crosse and West Central Wisconsin areas, has been tapped to be the agency’s contact on industrial sand mining issues.

Walls will serve as the initial point of contact on sand mining for public, private, legislative and media inquiries on the DNR’s regulatory authorities and interaction with the industrial sand sector. She will be based in the DNR’s La Crosse office.

“Roberta brings with her a wealth of knowledge and experience working with the public and the industry on sand mining,” said Mark Aquino, director of the DNR Office of Business Support. “We are very excited to have her on board as our agency lead for sand mining.”

Walls began working on sand mining issues for the agency when she joined the DNR in 2008 as part of the wastewater and stormwater programs. Prior to the DNR, Walls worked as a certified wastewater and chemical coordinator for industrial companies as an analytical chemist and water operator in Lynxville, and in the private sector worked with national companies as an analytical chemist and chemical coordinator for industrial wastewater treatment.

“I’m excited to begin this new phase of my career at the DNR,” said Walls. “Whether it’s my experience in sand mining, local governments or the private sector, I’m looking forward to putting those skills to work on this challenging issue for the state of Wisconsin.”

For more information about industrial sand mining in Wisconsin, search the DNR website, dnr.wi.gov, for key words “sand mining.”

La Crosse Staffer Chosen as New Agency Sand Mining Lead

WDNR Strategic Analysis (2015)

S and mining has occurred in Wisconsin for more than 100 years. Recent growth in the petroleum industry has created a high demand for sand that can be used for hydrofracking, technique used to extract natural gas and crude oil from rock formations in other states. Wisconsin has high-quality sand resources and, as a result, the DNR has seen a substantial rise in permit requests to the department to mine industrial sand. Industrial sand is sometimes called “frac” sand or silica sand.

The extracted sand is often processed locally. Processing of the sand typically involves washing and separating the sand into grain sizes suitable for hydrofracking. The sand is then shipped out of state for use as gas and oil fields for hydrofracking. The material removed during processing may be sold as a byproduct or is returned to the mine site as part of the reclamation process.

**WWF District Activity**

**Spotlight on District 8**

by Past President John Wagner

W

WF President George Borchart has instituted a monthly spotlight for our member clubs in our newspaper, the WisConserver. Every month our Club will write an article about what is happening in their District. August being the 8th month we hold a Spotlight in the Wisconsin District 8. Ron Gray, WWF President, has done a great job with the conservation issues over the years. WWF District 8 with its contributions to the conservation issues this club gratefully.

The Coyote Shoots take place in the lower peninsula. Also usually around the third Sunday in August this club has been putting on the Coyote Shoots. The Waushazha County Conservation Alliance is attended by WWF Board members and gives input to the Wisconsin DNR of their member clubs, including assuring adequate dog training and all areas of the state. He is working on improving these areas and trying to add more for the Big Coyote enthusiast. Well this is a short start to a new informative article. Maybe next August we will have something from every club in district 8 for the WisConserver.

WWF Release/Laurie McCormick 7-22-15

**Great Lakes Spotted Muskies Set for Release After Year of Careful Rearing**

by: Andy Lewandowski and John Wagner.

WILD ROSE, Wis. – After a year of careful rearing at the Department of Natural Resources Wild Rose Fish Hatchery, some 6,000 Great Lakes spotted muskies are set to begin the next phase of their journey, getting ready to test Wisconsin anglers and fish in select state lakes.

The muskies arrived in 2014 from Wolf Lake State Fish Hatchery in Michigan as part of a cooperative effort to introduce spotted muskies in the state, said Steve Fajjar, supervisor of the Wild Rose Fish Hatchery. While Michigan recently has focused on the Great Lakes spotted strain, Wisconsin's successful inland muskies program began with Upper Peninsula fish.

"Those young fish are looking great and they've been growing very well on a steady diet of freshwater minnows," Fajjar said. "The fish now average about 16 inches and weigh 11 ounces each. From all indications these fish have great growth potential and we're predicting an average growth of 53 inches for the females and 47 inches for the males." Wisconsin DNR fisheries biologists are working to increase the genetic diversity of the musky population in the waters of Green Bay and Lake Michigan to restore a strong and naturally reproducing population of fish. The waters of Green Bay, Sturgeon Bay and area maintained by the Oconomowoc Conservation Association are expected to create even more exciting as great destinations for musky fishing. The Menominee rivers have become known for their big muskies, and that's why the musky population in the waters of Green Bay and Lake Michigan are working to increase the genetic diversity of the musky population in the Great Lakes," Simonson said.

The remaining fish will be planted directly into Green Bay, the Menominee River and the Fox River, Simonson said. There, they will contribute directly to the trophy fishery and perhaps also increase the likelihood of sustained natural reproduction. While some natural reproduction has been documented in the region, DNR fisheries managers are pursuing both the introduction of the new fish and continued habitat improvement efforts to move closer to this goal. The first sample of 88 muskies, which have been anchored in the Great Lakes since 2014, are expected to contribute to the growth of the species in the state.
